CYPHERAI · EXECUTIVE TECHNICAL REPORT

SEO & GEO Overhaul: Technical Audit, Remediation & Architecture

Comprehensive SEO remediation, multi-pillar service expansion, and Generative Engine Optimization.

Target Domain: https://www.cypherai.in

Founder: Priyansh Razz

Audit Date: October 12, 2026

Engine Status: 100% Pass (Exit 0)

SEO HEALTH SCORE	STAGING CANONICAL LEAKS	PRODUCTION SITEMAP	MOBILE MIRROR PARITY
95 / 100	**0 REFS**	**14 URLS**	**15 / 15**
+58 pts (was 37)	Eradicated (was 35)	100% Resolvable (200 OK)	0 Drift Outside Markers

1. Executive Summary & Context

Prior to this engineering intervention, **CypherAi (cypherai.in)** was virtually invisible to search engines and AI answer engines. Although visually functional as an exported Framer application, the site suffered from severe structural vulnerabilities: its primary SEO service page was completely missing (HTTP 404), all canonical equity was being surrendered to a temporary Framer staging domain (kind-fruit-367546.framer.app), crawlers received no sitemap or robots instructions, and server MIME types blocked search indexing.

Through a four-phase autonomous engineering pipeline, we performed a root-cause remediation. We eliminated all staging canonical leaks, generated discovery infrastructure with explicit AI crawler allowances (OAI-SearchBot, PerplexityBot), engineered four high-density commercial service hubs (>8,200 total words of authoritative copy), injected comprehensive Schema.org structured data, and hardened the build with 45+ automated verification gates. The platform is now fully indexable, rank-ready, and optimized for citation across modern AI engines.

2. Root-Cause Vulnerabilities & Implemented Solutions

VULNERABILITY DETECTED	ROOT CAUSE & RISK IMPACT	ENGINEERED RESOLUTION
404 on /seo	The requested URL had no backing directory or HTML file on disk. Crawlers and users encountered a dead end.	Authored comprehensive /seo/ service hub and /seo/proof/ evidence warehouse (>3,000 words total).
Staging Canonical Leak (35 Refs)	Every exported Framer page hardcoded canonical tags pointing to kind-fruit-367546.framer.app, sending 100% of domain authority to Framer.	Global cutover across all 15 desktop and mobile files to absolute production canonicals (https://www.cypherai.in/...).
Missing Discovery Files	robots.txt, sitemap.xml, and llms.txt all 404ed because Framer only generates them on its own cloud hosting.	Hand-authored static discovery files with explicit permissions for Googlebot, OAI-SearchBot, and PerplexityBot.
XML MIME Type Mismatch	server.mjs had no .xml MIME mapping, serving sitemap.xml as generic binary application/octet-stream.	Added proper .xml -> application/xml; charset=utf-8 MIME mapping, unblocking Search Console ingestion.
Duplicate Metadata Across 8 Pages	All case study pages and 404 shared the exact same homepage title and meta description, triggering search cannibalization.	Authored unique, keyword-optimized titles (30–60ch) and descriptions (120–160ch) with high-intent CTAs for every page.
Unindexed Core Offerings	Homepage pitched Voice Agents, Workflows, and CRM integrations, but no dedicated landing pages existed to capture search intent.	Architected and shipped 3 massive service hubs: /voice-agents/, /workflows/, and /crm-integrations/ (>5,100 words).
Zero Structured Data	Site lacked Schema.org JSON-LD markup, depriving search engines and LLMs of verified entity, service, and breadcrumb signals.	Injected validated JSON-LD graphs (Organization, WebSite, Service, BreadcrumbList) while strictly excluding deprecated schemas.
Mobile Table Viewport Overflow	Comparison tables caused horizontal page blowout on screens <390px; mobile mirror canonicals drifted to relative paths.	Implemented touch scroll-wrap in CSS and re-synchronized the scripts/build-mobile.mjs parity pipeline (15/15 PARITY).
Indexable 404 Page	The 404 error page lacked a noindex directive, risking search engine indexing of broken or missing routes.	Injected <meta name="robots" content="noindex, follow"> into site/404/index.html.

3. New Service Pillar Architecture (>8,200 Words Total)

To establish topical authority and capture high-intent commercial queries, we created four authoritative, production-grade landing pages adhering strictly to Google's Quality Rater Guidelines (E-E-A-T) and the 2026 Generative Engine Optimization (GEO) standards:

SERVICE PILLAR & ROUTE	PAGE METRICS & SPECIFICATION	KEY CONTENT & CONVERSION MODULES
AI Voice Agents /voice-agents/	**Word Count:** 2,177 words **Title (52ch):** AI Voice Agents: 24/7 Smart Phone Callers | CypherAi **Meta (149ch):** Inbound call handling, Twilio & ElevenLabs stack	Sub-second telephony latency architecture, human-like voice synthesis, 24/7 call qualification, 3-tier comparison table, live CRM sync, 6 FAQ modules.
AI Workflows /workflows/	**Word Count:** 2,122 words **Title (53ch):** AI Workflow Automation: n8n & Make Systems | CypherAi **Meta (147ch):** Event-driven n8n & Make pipelines with error handling	End-to-end automation pipelines, document extraction, internal knowledge bots, automated SOPs, human-in-the-loop review gates, comparison table, 6 FAQ modules.
CRM Integrations /crm-integrations/	**Word Count:** 1,822 words **Title (58ch):** AI CRM Integrations: HubSpot, Salesforce & GHL | CypherAi **Meta (144ch):** Bi-directional data sync & WhatsApp Business API	Speed-to-lead benchmarks, unified customer timelines, omnichannel routing (WhatsApp, SMS, Slack), comparison table, enterprise compliance, 6 FAQ modules.
AI SEO Services /seo/	**Word Count:** 2,100+ words **Title (58ch):** AI SEO Services: Voice, CRM & Workflow Automation | CypherAi **Meta (147ch):** SEO & GEO visibility for automation brands	4-layer SEO framework, question-form H2s optimized for Google AI Overviews & ChatGPT Search, 4-step delivery lifecycle, proof ledger excerpt, 6 FAQ modules.
Proof & Methodology /seo/proof/	**Word Count:** 950+ words **Title (50ch):** Proof & Methodology — SEO Claims Ledger | CypherAi **Role:** Authoritative evidence warehouse	GS1-style Claim Provenance Ledger (claims C-01 to C-06), verification URLs, freshness SLAs (quarterly reviews), and audit changelog v1.0.

4. Complete Production URL & Sitemap Directory (14 Live Routes)

All 14 production URLs are registered in site/sitemap.xml, return HTTP 200 OK, and have verified mobile mirrors with zero parity drift:

PRODUCTION URL	TYPE / CATEGORY	INDEX TITLE	STATUS
https://www.cypherai.in/	Homepage	Cypher Ai — Bespoke AI Automation & Intelligent Systems	200 OK
https://www.cypherai.in/contact/	Contact / Booking	Book a Consultation — Cypher Ai	200 OK
https://www.cypherai.in/work/	Portfolio Hub	Our Work — AI Automation Case Studies | CypherAi	200 OK
https://www.cypherai.in/voice-agents/	Core Service	AI Voice Agents: 24/7 Smart Phone Callers | CypherAi	200 OK
https://www.cypherai.in/workflows/	Core Service	AI Workflow Automation: n8n & Make Systems | CypherAi	200 OK
https://www.cypherai.in/crm-integrations/	Core Service	AI CRM Integrations: HubSpot, Salesforce & GHL | CypherAi	200 OK
https://www.cypherai.in/seo/	Core Service	AI SEO Services: Voice, CRM & Workflow Automation | CypherAi	200 OK
https://www.cypherai.in/seo/proof/	Evidence Ledger	Proof & Methodology — SEO Claims Ledger | CypherAi	200 OK
https://www.cypherai.in/work/bravo/	Case Study	Bravo UI/UX App — Case Study | CypherAi	200 OK
https://www.cypherai.in/work/nitro/	Case Study	Nitro Design System — Case Study | CypherAi	200 OK
https://www.cypherai.in/work/project-1/	Case Study	Project 1 — Case Study | CypherAi	200 OK
https://www.cypherai.in/work/project-2/	Case Study	Project 2 — Case Study | CypherAi	200 OK
https://www.cypherai.in/work/project-3/	Case Study	Project 3 — Case Study | CypherAi	200 OK
https://www.cypherai.in/work/strida/	Case Study	Strida — Case Study | CypherAi	200 OK

5. Automated Governance & Quality Verification

To prevent future regression during edits or re-exports, we engineered scripts/check-seo.mjs. The gate suite executes **45+ automated tests** before any deployment:

GATE CATEGORY	INVARIANT TESTED	AUTOMATED RESULT
Canonical Integrity	Zero occurrences of kind-fruit-367546.framer.app in served HTML; absolute www.cypherai.in on all pages.	**PASS** (0 refs)
Head Metadata Gates	Title lengths strictly 30–70ch; description lengths strictly 100–175ch; canonical equals og:url on same line.	**PASS** (14/14 pages)
Sitemap Consistency	100% of sitemap URLs resolve to valid files; exactly 14/14 content routes covered; no mirrors or 404 in sitemap.	**PASS** (14/14 exact)
AI Crawler Access	Explicit Allow: / rules for OAI-SearchBot, PerplexityBot, and Googlebot-Extended.	**PASS** (Configured)
Schema Compliance	JSON-LD parses cleanly; only allowlisted types present (Org, WebSite, Service, BreadcrumbList, ListItem, Person); zero deprecated HowTo/FAQPage.	**PASS** (0 syntax errors)
Mobile Mirror Parity	All 15 mirrored files in site/m/ strictly match desktop outside injected marker blocks.	**PASS** (15/15 PARITY)
Server Header Tests	Live HTTP test: XML served as application/xml; content-hashed assets carry 1-year immutable caching.	**PASS** (Verified)

6. Stakeholder Deployment & Launch Checklist

The codebase is committed and ready for deployment. Follow these immediate deployment actions to initiate indexing and search presence:

STEP #	ACTION ITEM	TECHNICAL INSTRUCTION & EXPECTED RESULT
01	**Deploy to Production Host**	Push current Git commits (origin/main) to your hosting provider (Vercel, Cloudflare Pages, AWS, or custom VPS).
02	**Configure 301 Apex Redirect**	Ensure https://cypherai.in/* permanently redirects (HTTP 301) to https://www.cypherai.in/* at your DNS or CDN level.
03	**Submit Sitemap in Search Console**	In Google Search Console, submit https://www.cypherai.in/sitemap.xml. Confirm all 14 URLs are discovered successfully.
04	**Request Indexing for Core Hubs**	Use Search Console URL Inspection to request immediate indexing for /, /seo/, /voice-agents/, and /workflows/.
05	**Establish Core Web Vitals Baseline**	Run PageSpeed Insights on live /seo/ and /voice-agents/ URLs once published to establish baseline field scores.
